

ER Model Handwritten Notes

Database Management Systems | Unit 1: Introduction to DBMS and ER Model

The entity-relationship model describes data as entities, attributes and relationships.

- Entity: a real-world object, drawn as a rectangle (for example Student).
- Attribute: a property of an entity, drawn as an oval; the key attribute is underlined.
- Relationship: an association between entities, drawn as a diamond.
- Cardinality: one-to-one, one-to-many, many-to-many.
- Weak entity: has no key of its own and depends on a strong entity.
